MEERKAT AI

Stablecoins, privacy, and AI. Made invisible to the user.

// IN ONE LINE

WHAT IS MEERKATT AI?

A privacy-first AI platform building consumer apps that create value for society. Neobanking for the pseudonymous economy, starting with an open-source payment layer that connects onchain money to everyday commerce.

STABLECOINS

Fans pay in BTC, ETH or USDC, straight to a self-custodial wallet.

PRIVACY

Your wallet is your identity. No email, phone or KYC.

AI

Agents that create, post and earn for you.

For: creators blocked from Stripe who want to accept stablecoins, and merchants adding new customers and revenue streams.

// THE PROBLEM

OLD RAILS, NEW ACTORS

When AI agents become our bankers and doctors, verifiable, private inference is what makes them trustworthy.

01 · VERIFICATION

Built for humans running each step by hand. It doesn't scale when agents are the main actors.

02 · GOVERNANCE

DAOs stall on extractive politics, bureaucracy and unchecked spending, held back by rigid infrastructure.

03 · PAYMENTS

Cards are high-friction, hard to accept, carry high minimums and don't fit a programmable internet.

Our answer: rely on cryptographic proofs, not central authorities.

// WHO GETS CUT OFF

BANKED OUT BY DESIGN

2 in 3

adult content professionals have lost a bank account or financial service to discrimination. [source]

AND BEYOND

Stablecoins already gave millions in emerging markets dollars without a bank and savings without permission. Creators, gamers and Latin American users still lack a simple way to get paid in them.

// THE SOLUTION

NO STUDIO.
NO BANK.
NO PERMISSION.

An open-source payment layer for content creators and AI agents. Set up a wallet and start earning in seconds.

// THE PRODUCT

YOUR WALLET IS YOUR ACCOUNT

Sign in with a wallet

Token backed by prepaid USDC on Base or Solana. No email, phone or KYC.

Custom payment links

Accept Bitcoin, Ethereum and stablecoins as easily as cards, with cross-chain x402.

Commerce protocol

Subscriptions priced in any currency, plus items and passes. Funds land in a self-custodial wallet in seconds.

Private by default

Venice AI for private inference; zero-knowledge proofs with zkPass and zkVerify.

// THE AGENT

AN AGENT THAT PAYS ITS OWN WAY

An onchain agent that reads the blockchain live and uses its own wallet to pay for everything, including its inference.

01

READS

Watches the chain live, block by block.

→

02

HOLDS A WALLET

Its own keys and its own balance.

→

03

PAYS ITS WAY

Every service it uses, inference included.

// WHY NOW

THE INTERNET IS SPLITTING IN TWO

THE HUMAN INTERNET

One user for 30 years: people who search, compare, click and buy.

THE AGENT INTERNET

Billions of agents with wallets. SaaS was multi-billion; agents are multi-trillion.

X402

Open standard for internet-native payments. Clients and servers never think about gas or RPCs.

ZKPASS

Prove facts from any HTTPS site with no OAuth, API keys or middlemen, and no personal data exposed.

// BUSINESS MODEL

A MARKETPLACE FOR EVERYONE

01	Agent and human marketplace	MPP accepts payments from agents, apps or humans. Beta live.
02	Webstores and checkout	Fraud-proof payments for gamers and adult performers
03	Know Your Agent pricing	Across the AI and human marketplace [pricing]
04	Onchain gaming tournaments	Payouts in stablecoins and tokens such as frxUSD and PENGU
05	Voice dictation	Voice notes and voice-driven shopping

// GO-TO-MARKET

SHOW IT, DON'T EXPLAIN IT

WEDGE

Creators censored by banks and card processors, who can accept stablecoins today.

MOTION

Founder-led forward-deployed engineering since 2021: users see the product in action.

PRODUCT

A neobanking app connecting onchain money to the real-world economy.

Live on Base, Ethereum, Bitcoin (Stacks) and Unichain.

// WHY WE WIN

CRYPTO-NATIVE FROM DAY ONE

- x402 lets wallets sign in and pay for inference directly with USDC on Base or Solana
- Private AI via Venice: anonymous, zero data retention, prompts never stored or logged
- Zero-knowledge proofs with zkPass and zkVerify
- Deployed on Bitcoin, unlocking a Bitcoin DeFi flywheel
- Frictionless Ethereum onboarding with Aragon
- Voice-enabled agent for shopping and commerce
- A brand kit made for agents and humans

// TEAM

BUILDING TOGETHER SINCE 2017

Christian Deciga

FOUNDER

- Co-founder, IQ.wiki (Everipedia): scaled to millions of monthly users
- Mentored its first hires; guidance contributed to its Series A
- Frax Finance: code review, architecture, engineering quality
- Open-source AI contributor; hackathon winner at ETHGlobal, Onchain Summer, FarCon

Tammer Riad

Yale alum. Interned at Everipedia's first LA office; learned EOS smart contracts in a weekend.

Nikka Piterman

Teacher and iOS engineer; former IQ.wiki intern.

// PRODUCT ROADMAP

WHAT WE BUILD NEXT

No-KYC neobanking

A bank account for the pseudonymous economy, run from your wallet.

A · Ravebae Exchange

AI ticketing with airline-style dynamic pricing and targeted offers. Co-founder launch in Japan.

B · Whale Squares

AI for live sports markets: instant win probabilities and match-fixing detection.

C · AR / VR

AI as the intelligence layer that makes mixed reality aware of what you're looking at.

WEB2 EASE.
WEB3 FREEDOM.

Our mission: bridge traditional platforms and decentralized ones in a way that is secure, private and simple, and bring the benefits of AI to every human around the world.

// OPEN SOURCE AS A DEMOCRATIZING FORCE FOR AI
